

Wood Products

Benefits of Wood Flooring

Wood flooring generally maintains its value more efficiently than other types of flooring. Real estate agents often claim that homes with wood flooring sell faster and for higher prices than houses without wood floors. Additionally, being a natural resource, wood is ecologically friendly because it is both renewable and recyclable. Wood floors have health benefits because they do not collect dust and other allergens.

■ **SOLID:** 100% solid hardwood without additives. It is the traditional choice in fine flooring and is the most customizable.

■ **ENGINEERED:** Solid wood veneer; 4-6mm thick, as compared to other engineered products (3mm or less). The outermost is a hardwood veneer of the species you desire. The inner layers are made of Baltic Birch plywood. The layered core of engineered hardwood makes the product more stable than regular hardwood, while the outer veneer surface adds beauty and authenticity.

■ **UNFINISHED:** Solid or engineered; in its natural state, no stain or paint.

■ **PREFINISHED:** Solid or engineered; finished in your choice of a particular stain or paint. Our selection of color is limited only by your imagination.

We can match practically any color you desire whether you are color-matching a fabric, paint sample, or a natural concept.

■ **CUSTOM:** Solid or engineered; texture and finishing techniques to make your flooring unique. Choose a clear grade without lines, marks or knots. Or, select a grade with weathering, lines, marks and knots. Finishing techniques include hand-scraped, wire-brushed, smooth sanded, antique distressing and numerous beveling methods all performed by seasoned artisans.

THE MOST COMMON FLOORING PATTERNS:

Single Plank

Random

Herringbone

Chevron

Parquet is available upon request.
